

Working together: the MLRO experience

G. Bianco, V. Luceri, R. Sala, G. Nicoletti

The Matera Laser Ranging Observatory (MLRO) is a good candidate site to check how SLR station operators, engineers and data analysts work together, since all of them work physically in the same place. However, this does not necessarily result in a perfect cooperation. A few examples of such cooperation are described here, along with the identification of weak areas/links and a discussion of possible improvements.
